The Philippine plate subducted under the North American plate in Japan on 11th March 2011 at 2:46pm. This caused a major earthquake with a magnitude of 9. A huge tsunami followed this earthquake.

This earthquake lasted a long time and was followed by over 700 aftershocks. Twenty-four minutes after this disaster, a huge tidal wave reached Japan's coast. There were ten waves all together!
Japan has now moved 1km east.

Also England is a fraction of the Pacific Ocean.

The wave has now moved 1km east.

The best time around the world is.

One of the tsunami is quarter of a million are left.

20,000 are injured and a disaster 10,000 died and a

Car getting dragged by the wave.

There was 1km between each.
