I am an event manager for Oxfam. I plan and run our high profile fundraising events that raise money for causes like the Kashmir earthquake appeal. My geographical knowledge of the world is very important in this job, as it means that I can understand the complex issues that Oxfam deals with.

When I finished university I studied for one year for my PGCE qualification, and I now work in a Sixth Form College two days a week. I have just returned from a very successful school field trip to New York where we studied urban management and transport.

I work for the Environment Agency as a hydrologist. My work consists of visiting rivers in the area and monitoring the water levels and water quality.

I am employed by a company that values commercial, residential and agricultural property. I also assist people who wish to sell these properties and often have to provide my professional opinion in disputes over property values.

I am responsible for planning and introducing waste management and recycling schemes in my local area, for example raising awareness of recycling facilities in the area and encouraging people to use them.

I develop digital mapping software for use by Police forces across Yorkshire to examine geographical data to help understand why communities suffer from different types of crime and anti-social behaviour.

I work for my local council to redesign areas such as parks and shopping centres, so that they are more accessible to disabled people and the elderly.

I am responsible for the smooth running of the transport networks in my local town – buses, trains, roads and rail. I am also involved in planning new transport schemes such as park-and-ride.

When I finished university I studied for one year for my PGCE qualification, and I now work in a Sixth Form College two days a week. I have just returned from a very successful school field trip to New York where we studied urban management and transport.
