The Sharqiya Climate

The Sharqiya climate graph
The Sharqiya Climate
Reading a UK climate graph

From the UK climate graph we can see that:

• The month with the highest rainfall is October
• The average temperature in November is 9°C
• The average rainfall in January is 122mm

Use this information to work out how to answer the following questions:

1. In which month are the highest temperatures found? ......................

2. In which month are the lowest temperatures found? ......................

3. True or false: July sees the highest mean temperature ......................

4. How much rainfall falls on average in April? ......................

5. What is the annual temperature range for the UK? ......................

Now try to write clear instructions which explain how to read a climate graph. Remember to include references to the three axes and when to use them.
