They fly to the US to record yet another hit single. The CDs are made from many different raw materials, including aluminum. The CDs are made at the manufacturing plant. We make CDs at the packaging plant. CDs are put into plastic cases or cardboard packaging. The CDs are taken to distribution centres by plane or lorry. Then they are taken to another place for production. The different materials are processed in a factory. We buy them in shops or online. And we play them on our stereos, in our computers, on our...
