Key Questions
How can the data be presented?
What presentation techniques would be appropriate?
What else do we need to consider in the presentation process?

Documents
Handout 3.1 Evaluation of presentation technique
Handout 3.2a Data presentation process card sort
Handout 3.2b Data presentation process

Data sets and resources
River data
Visitor questionnaire data
Environmental Quality Survey data
Ambleside data and maps

Main
Handout 3.1 Presentation Techniques
Ask students to look at the selection of data presentation techniques – they can think about the advantages and disadvantages of each technique and examples what kinds of data they would display using them.

Groups or pairs to choose a technique appropriate to their data and complete the technique (arrange so that a range of different techniques are used). These are then presented on the outline, enlarged to A3.

Handout 3.2 Evaluation of Presentation Technique

Carousel the activity for students to evaluate a range of techniques of their peers by completing the ‘Peer evaluation’ boxes on the handout.
Display the range of techniques. Feedback and evaluation of choices and effectiveness of the techniques.

Exam-style question to summarise.
Evaluate the technique you used to present your data.

Include the advantages and disadvantages and how you could improve the presentation. You could include a suggestion for a better method.

Plenary
Handout 3.3a Data presentation process card sort
Handout 3.3b Data presentation process
Card sort activity and discussion of the process of presenting data. The process is not prescriptive, there may be variation depending on the resources and data.
## Handout 3.1 – Presentation techniques

Look at this list of possible fieldwork data presentation techniques:

<table>
<thead>
<tr>
<th>Sketch map</th>
<th>Bar chart</th>
<th>Histogram with equal class interval</th>
<th>Isoline</th>
<th>Proportional symbols</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Sketch map" /></td>
<td><img src="image2" alt="Bar chart" /></td>
<td><img src="image3" alt="Histogram" /></td>
<td><img src="image4" alt="Isoline" /></td>
<td><img src="image5" alt="Proportional symbols" /></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Field sketch</th>
<th>Pie chart</th>
<th>Scatter graph</th>
<th>Dot maps</th>
<th>Proportional Flow lines</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image6" alt="Field sketch" /></td>
<td><img src="image7" alt="Pie chart" /></td>
<td><img src="image8" alt="Scatter graph" /></td>
<td><img src="image9" alt="Dot maps" /></td>
<td><img src="image10" alt="Proportional Flow lines" /></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Line chart</th>
<th>Pictogram</th>
<th>Choropleth</th>
<th>Desire lines</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image11" alt="Line chart" /></td>
<td><img src="image12" alt="Pictogram" /></td>
<td><img src="image13" alt="Choropleth" /></td>
<td><img src="image14" alt="Desire lines" /></td>
</tr>
</tbody>
</table>
Handout 3.2 – Evaluation of presentation technique

Type of data collected:

Title:

Presentation inserted here:

Peer Evaluation: Advantages of presentation technique:

Justification of choice of presentation technique:

Peer Evaluation: Disadvantages of presentation technique:
Use appropriate mathematical and statistical techniques on the data e.g. calculate means, ranks and dispersions

Collate the fieldwork data
Tabulate the data into a spreadsheet

Create an accurate presentation technique

Evaluate the presentation technique when drawing conclusion to the enquiry

Decide on an appropriate presentation technique. Consider whether the data is visual, qualitative or quantitative

Use a presentation technique to analyse and explain the fieldwork data

Choose an appropriate scale, base map, interval size

Collect fieldwork data
- in pairs/groups
- in different locations
- at different times
Handout 3.3b – Process of data presentation

Collect Fieldwork Data
• in pairs/groups
• in different locations
• at different times

Collate the fieldwork data
Tabulate the data into a spreadsheet

Decide on an appropriate presentation technique.
Consider whether the data is visual, qualitative or quantitative

Use appropriate mathematical and statistical techniques on the data. e.g. calculate means, ranks and dispersions.

Choose an appropriate scale, basemap, interval size

Create an accurate presentation technique

Use the presentation technique to analyse and explain the fieldwork data

Evaluate the presentation technique when drawing conclusion to the enquiry
