

International Convention on Climate Change

The aim of the International Convention is to discuss the future for geo-engineering and to decide whether or not it has a role to play in finding a solution to global warming.

Task:

You are going to give your views on the following talking points:

- To what extent would you be prepared to invest in more research of geo-engineering techniques?
- What are the risks associated with geo-engineering for your country and are they too great?
- Should we be focusing on the challenge of mitigating carbon emissions?
- Does geo-engineering provide us with an easy option?

Your views...

You need to consider the following when you are deciding how to contribute to the debate:

- What is the current economic, social, environmental and political position of your country?
- What are your priorities for the future?
- Focus on Global Warming:
 - What are your intentions in the short term?
 - What is your long term plan?

Tip: Think about solutions at all scales and of all types.

You will present and justify your national views to the international panel.
