

## Skywalk starter

Just like an eagle can fly into the Grand Canyon my vision was to enable visitors to walk the path of the eagle...

My dream was to find a balance between form function and nature.

On May 2005 the final test was conducted and the structure passed engineering requirements by 400 %, enabling it to withstand the weight of 71 fully loaded Boeing 747 airplanes.

The Skywalk gives visitors the sensation of standing suspended 4000 feet above the Colorado River at the Canyon floor

This can be read very slowly with the music from the Skywalk website playing in the background
