Paragraph 2
The impacts of tectonic hazards are worse in LICs, for example, as they have less money. LICs may not be able to afford things such as healthcare, safer building structures, and warning systems. This means that when buildings would collapse and people may not be able to prepare in advance, which would increase the impacts of tectonic hazards. An example of this is that only 181 people died in the New Zealand earthquake compared to 8,832 in the Nepal earthquake. This is mainly due to the fact that Nepal is a LIC. The expenditure less...
