

MODULE 8: HOW IS THE UNITED KINGDOM'S CLIMATE CHANGING SEASONALLY?

ANSWER SHEET

ACTIVITY ONE

The extreme south eastern corner of the UK, the area nearest to continental Europe will be the warmest as it is the furthest away from the moderating influence of the Atlantic Ocean.

ACTIVITY TWO

The temperature increases take effect earlier in the southeast than in the north and west.

ACTIVITY THREE

The greatest temperature increases affect a larger area of the south and east than in other seasons.

ACTIVITY FOUR

1. The temperature increases spread gradually from the south and east to cover the whole of the southern area of the UK.
2. Summer is the season most affected.
