

The Water Cycle

1. Add on where you would find each of the key terms in the empty boxes.
2. Use the facts from the PowerPoint to add more information about the processes specifically to oceans.
3. Through any method of your choice (i.e. a diagram, sentence picture etc) explain the role you think oceans play in the water cycle.

Condensation: water vapour cooling and turning into a liquid.
Evaporation: water turning into vapour when heated.
Transpiration: loss of water from plants.
Precipitation: any form of water falling from the sky i.e. rain, snow etc.

What role do oceans play in the water cycle?
